EDUCATION

LJ UNIVERSITY

BACHELOR'S IN INFORMATION TECHNOLOGY

Year : 2024 - 2027

BSc. IT

Year-1 Subjects:

- FOP (Fundamentals of Programming - C and Advanced C)
- FCO (Fundamentals of Computing)
- WDT (Web Development)
- BM (Basic Mathematics)
- DBMS (Database Management System)

Year-2 Subjects:

- DMCS (Discrete Mathematics for Computer Science)
- PHP
- DS (Data Structure)
- OOCPP (Object Oriented Programming using C++)
- JAVA
- BS (Business Analysis using R)
- OS (Operating Systems and Virtualization)
- Linux

OverAll CGPA of 2 Years: 9.325

CERTIFICATIONS

- **C for Everyone : Programming Fundamentals** (University of California) – Issued 2025
- **Oracle SQL Basics** (LearnQuest) – Issued 2025
- **Introduction to Generative AI** (Google Cloud) – Issued 2025
- **Cybersecurity with Python**(Google) – Issued 2025

HACKATHONS

- Participated in Hackovate LJ 2025

SKILLS

SOFTWARE DEVELOPMENT

- **C, Python, JavaScript** Basic understanding of C, Python, and JavaScript, used for developing simple software applications and solving computational problems.
- **PyTorch for Machine Learning Models** Basic experience using PyTorch for developing simple machine learning models, with a focus on training and evaluating models for small-scale projects.
- **Version Control with Git and GitHub** Comfortable using Git and GitHub for version control in group projects, ensuring efficient code collaboration and management.

CONCEPTS

- **Data Structures** Familiar with core data structures like arrays, linked lists, trees, and graphs, applying them in problem-solving scenarios and coding assignments.
- **Algorithms** Comfortable implementing sorting, searching, and basic dynamic programming algorithms, with a focus on problem-solving in coding challenges.
- **Operating Systems** Basic knowledge of operating system concepts, including process management and memory management, learned through coursework and projects.
- **Database Systems** Studied SQL and relational database concepts, with practical experience in creating and querying simple databases for small projects.

PROJECTS

- **Tic Tac Toe Game (C)** Developed a terminal-based two-player Tic Tac Toe game using C, emphasizing fundamental programming concepts such as control flow, loops, functions, and 2D arrays. Designed a clean ASCII-based game board and implemented logic to detect wins, draws, and invalid moves, enhancing game interactivity and user experience through clear prompts and validations.
- **Bakery Inventory Order Management System (C)** Designed and implemented a complete text-based management system in C to handle bakery inventory, customer data, and order processing. Integrated modular structures for products, customers, and orders with file-based persistence. Included features such as login authentication, date handling, dynamic order entry, structured display formatting, and search functionalities, enabling real-world simulation of bakery operations.
